

Why if I pay @VerizonWireless \$30 4 internet in & through an iPhone do I have to pay \$20 use that internet via the iphone on other devices? If @VerizonWireless charged me \$5 to attach other devices that would be reasonable. But as it is I'm paying for internet 2x via 1 device.

If I have and computer connected to a router at home and pay \$50 for all the data going in and out of that router. I am not charged \$40 a month to use another computer in my home.

If I pay for digital cable at home \$50 a month, I don't have to pay \$40 a month to use more than one TV on that service.

Why is it so different for wireless data?
