

I need advice from those of you out there.

I am using WordPress 3.3.1, [Thesis](#) 1.8.2 (my theme), and the [Flickr Photo Album](#) plug-in 1.1

.
You see my website and how it looks and then you look at my [photo page](#) and see major differences. I need simple steps to make the plug-in and my theme work nicely and look the same. Or I need a Flickr WordPress plug-in that will work with Thesis. Please help me out!

UPDATE

After trials and much work, I scrapped the plug-in I was using. I like the one I'm using now. It works with my theme and requires no coding. I am now using Flickr Press which can be found via searching on the WordPress plug-in page or here:
